

Attorney Docket: 087828-0210 (3KG035783)

ABSTRACT OF THE DISCLOSURE

An information apparatus controls a plurality of acoustic devices, each having at least one speaker unit. The apparatus has a memory storing first information corresponding to a number of speaker units of the corresponding acoustic device and the positions of their arrangement and a control unit configured to obtain second information corresponding to a position of a user and a number of channels to be used for reproducing a sound. The apparatus determines a combination of acoustic devices to be used for reproducing the sound by using the first and second information.
